

aloha **Cloud**

Kitchen Display for **Aloha Cloud**

Optimize Your Restaurant with Kitchen Display

Speed up your kitchen processes! Fully integrated with NCR Aloha Cloud, Kitchen Display gives your staff a digital order display that makes it easy to route customer orders to the kitchen—and turn tables faster.

Improve communication

Ditch the kitchen chits. Cooks receive online and in-store orders instantly from the point of sale.

Decrease ticket times

Improve service speed by monitoring prep time. With screens for every station, cooks can easily stay on top of orders to ensure that customers get served faster.

Reduce waste

Kitchen Display replaces paper tickets and kitchen printers which can be error prone. With orders displayed on a tablet or monitor rather than handwritten or printed to a docket, you can cut down on mistakes—and waste.

Key features

Cooks are alerted to new orders with an audible “ding” to ensure open tickets don’t go unnoticed.

If a customer wants to change their order and an item is voided, an audible “buzz” quickly alerts the kitchen staff.

Each ticket is prioritized by color code to ensure cooks are always aware of how long each ticket has been open. This encourages staff to focus on orders that are reaching your pre-determined service time limits.

- **Blue:** Indicates a brand-new order
- **Yellow:** Warns cooks they’re starting to lag behind
- **Red:** Alerts staff to seriously overdue orders that require immediate attention

Once an order is complete, simply bump an order off screen with a tap and even see all fulfilled orders on one screen.

Amplify the power of Aloha Cloud with Kitchen Display
