

Online ordering for restaurants

Commerce for Aloha Cloud

Grow beyond your footprint and exceed customer demands with Commerce for Aloha Cloud.

Online ordering is table stakes for restaurants. With Commerce for Aloha Cloud, you can offer flexible checkout options so customers can visit your website, place an order and set a time for pickup – in-store or even curbside – that same day.

If you want to cut back on physical menus and checkout lines to facilitate social distancing, your customers can scan a tableside QR code to place orders, select their table, pay and even tip from their smartphone.

Customers go through a simple, two-step checkout process and store employees receive a notification on the POS when orders are added to their Online Orders queue.

Menu management is simple and fully integrated to the Aloha Cloud POS. That means you can use existing items and modifiers in your back office to build your online menu.

Contact us today:

Drive sales

Extend your business and increase revenue by providing another safe, comfortable way for customers to order.

Enhance consumer satisfaction

Customers can order anywhere anytime and pickup at their convenience without waiting in line.

Improve order accuracy

Instead of relaying orders verbally, customers select exactly what they want. Improve in-store efficiency.

Improve in-store efficiency

Add contactless dining to put the power of ordering and payments in the customers' hands and do more with the staff you have.
